

I oppose the petition RM-10867 and submit requesting the following changes be enacted.

1. Request no grandfathering of license classes to a higher class of license.
2. Propose the current technician class license remains as current adding access to HF segments of bands equal to those already granted and those proposed by ARRL for novice spectrum and some minor additional voice spectrum on 5 HF bands only. The voice portion of which should be considerably less and separate from the spectrum already enabled for General, Advanced, and Amateur Extra Class.
3. Suggest leaving intact the code requirement for all current classes except novice(proposed) and technician. I also request code requirements be raised for Amateur Extra to at minimum 13 WPM and a strengthening of the Amateur Extra Class technical exam requirements.
4. Propose that current question pool question be made private and only the topics to be cover in the examinations be published to the public. Question pools should only be made available to VEC and VE entities.
5. Adding an additional spectrum for all HF, and 2 meter bands for Voice and repeater operation respectively to alleviate overcrowding.
6. Placing the vanity call system back on a first come first priority basis and eliminating multiple concurrent applications for for a specific vanity call.
